EDUCATION

Purdue University

Computer Engineering, B.S.E. — Software Engineering Concentration | GPA: 3.51

West Lafayette, IN

Expected Dec. 2027

Relevant Coursework: Computer Communication Networks, Data Structures & Algorithm, C Programming, Digital Systems Design

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, C/C++, SQL, HTML/CSS

Data & Machine Learning: Apache Spark, PySpark, scikit-learn, pandas, NumPy, NLP, CNNs, Data Processing

Tools/Platforms: Docker, Kubernetes, Git, GitHub, CI/CD, Claude Code, GitHub Copilot, Cursor, OpenAI, API Integration

Core Skills: AI/ML Model Development, Multi-Agent Systems, RAG, Distributed Systems, AWS Bedrock, AWS SageMaker

EXPERIENCE

AI Developer Intern

[Gilead Science](#)

Foster City, CA

May 2026 – Aug 2026

- Developed a **5-agent AI orchestration** workflow across a **6-stage document** pipeline, automating classification, impact assessment, validation, and recommendations while reducing a **30–60 minute manual review** workflow to **~2–3 minutes**.
- Integrated historical knowledge bases and built a multi-stage validation architecture **tested across 200+ cases**, cross-referencing new information against prior records to improve contextual reliability of AI-generated recommendations.
- Partnered with **cross-functional teams** to understand workflows, translate business requirements into agent capabilities.
- Evaluated **4+ LLM/model configurations across AWS and Azure**, using Copilot, GPT, and Claude for AI workflows.

Software Researcher

[BASF Corp. – Corporate Partners Program](#)

West Lafayette, IN

Aug 2025 – May 2026

- Analyzed **10,000+ agricultural reviews using Python, NLP**, and sentiment analysis to generate data-driven business insights.
- Engineered **Apache Spark** pipelines for REST API and web-scraped data, preprocessing and analysis across **10,000+ records**.
- Applied concepts from **AWS Generative AI for Developers** to explore scalable generative AI use cases and service integration.
- Automated and enhanced system deployment** via streamlined CI/CD pipelines, increasing efficiency and **reducing release time by 30%**.

Unreal Engine Developer Intern

[Escape™ App AI](#)

Indianapolis, IN

June 2025 – May 2026

- Designed backend system in **C++/Blueprint** to be able to scale for **1,000+ concurrent users** with high performance.
- Built software tests for **C++ networking systems**, debugging performance and connectivity issues to improve multiplayer reliability.
- Integrated Unreal Engine with **Xcode** to deploy iOS apps, maintaining a **30-fps performance** on mobile devices.
- Collaborated on debugging and system-level optimization to ensure smooth operation across multiple platforms.

Software Engineering Intern

[Narb](#)

Remote

May 2025 – Sept 2025

- Built RESTful backend services using Node.js and MySQL to automate multi-step workflow and task management processes.
- Integrated Notion, Gmail, and Google Sheets APIs to create cross-service data pipelines and unified task flows.
- Containerized Node.js backend with **Docker** and deployed them through **Kubernetes**, supporting scalable service orchestration.

PROJECTS

Gesture-Controlled Robotic Vehicle

[Purdue Spark Hackathon](#)

West Lafayette

March 2026 – May 2026

- Programmed **embedded C firmware** across **2 RP2350 controllers** to process wireless hand-gesture commands and control the speed, direction, and movement of a **4-wheel robotic vehicle** in real time, supporting reliable **hardware-software integration**.
- Implemented gesture classification, debugging, and fault-recovery, including an **800 ms** communication timeout for connection loss
- Built a **Docker** containerized telemetry service and deployed it on **Kubernetes** to support scalable testing across controllers.

Skin Lesion Classifier

[Hackathon Project](#)

Dublin, CA

July 2025

- Trained and deployed a **Convolutional Neural Network (CNN)** model using **Python** to accurately classify skin lesion images, leveraging the HAM10000 dataset and implementing preprocessing techniques to improve model performance.
- Designed a **multi-factor risk assessment** that combines CNN predictions and clinical ABCDE features for diagnostic insight.
- Documented model interpretability and decision logic to promote **transparency, ethical AI use, and clinical applicability**, aligning with healthcare goal for improving patient outcomes through technology-driven innovation.
